

KFFL 2004

Friday, October 29, 2004

Dear Fellow KFFL Owners:

Welcome to the seventh annual Midseason Report. I've added a couple of new statistics and graphs this year.

Good luck for the rest of the season.

Regards,

Drew

Co-owner, Klein High nancyboyz.com

Strength of Schedule Analysis

In the previous table, I calculated the strength of schedules for the KFFL.

The best measure of a team's success is the total points scored. This means that you drafted and played the right players. Win/loss depends on how good your opponents were that week. Since we do not play each team the same number of times, some teams will have more difficult schedule than others will. Points against are a good measure of the strength of your opponents to date on the week they played you, but it doesn't measure the difficulty of your schedule to date or in the future.

Season to Date Opponent Scoring - this is the sum of the total points scored by each of your opponents through game 7.

Rank - this is the rank of your opponents scoring, with 1 being the strongest and 10 being the weakest. This is a measure of how good your opponents have been so far in the season. Some interesting notes:

- The Bad Monkeys have had the hardest schedule to date, and the Wandering Snails have had the easiest schedule to date, based on opponent strength.
- The Bad Monkeys have had the most points against, confirming that their schedule was the hardest. The Snails had the second least points against, confirming that their schedule was one of the easiest.
- The Mountain Oysters have had the fourth most points scored against them, even though their schedule is the 9th hardest. Team Blanstein had the least points scored against, but the eighth hardest schedule.

This means that the Oysters opponents stepped up against them, scoring more than their average, and the Blanstein opponents laid down against them, scoring less than their average.

Remaining Games Opponent Scoring - this is the sum of the total points scored by each of your opponents for game 8 through 14.

Rank - this is the rank of your opponents scoring, with 1 being the strongest and 10 being the weakest. This is a measure of how good your opponents will be for the rest of the season. Some interesting notes:

- The Mountain Oysters have the most difficult schedule remaining.
- The Bad Monkeys have the easiest schedule remaining (good news for the Monkeys).
- The Puffers, Monkeys, and Rhinos may improve their records because of easier second-half schedules. The Snails, Oysters, and Team Blanstein may not fare as well because of tougher second-half schedules.

Entire Season Opponent Scoring - this is the sum of the total points scored by each of your opponents for the season.

Rank - this is the rank of your opponents scoring, with 1 being the strongest and 10 being the weakest. This is a measure of how good your opponents will be for the entire season. Some interesting notes:

- The nancyboyz.com have the easiest overall season schedule.
- The Devil Dogs have the most difficult overall season schedule.
- The difference between the easiest and most difficult schedule is a little more than one point per game (1.35).

Strength of Schedule Analysis

Season to Date Opponent Points Over Average – the points per game opponents scored above or below their average scoring

Rank - this is the rank of your opponents scoring, with 1 being the strongest and 10 being the weakest.

To measure whose opponents have "stepped up" against them, I calculated the total points per week for all opponents above the opponents average weekly scoring. A high positive number (like 38.4 for the Monkeys) means the Monkey's opponents have scored almost 40 points more against the Monkeys than their average against the rest of their opponents. This means that even though the Monkeys had the most difficult schedule so far, their opponents stepped up and scored more against them than they did against everyone else. In the same way, a large negative number (like -81.6 for Team Blanstein) means that opponents scored much less than their average, and Blanstein have the second lowest points against and yet is tied for the second best record.

Standard Deviation – the standard deviation of scoring for each team through week 7

Rank - this is the rank of the consistency of your scoring, with 1 being the most consistent and 10 being the least consistent.

Lastly, consistent scoring week to week usually means a good record, depending on how much scoring occurs. Standard deviation measures how much scoring varies week to week. A low number means more consistency. Some interesting notes:

- The Snails have the least consistent scoring, and are 5-2. This high standard deviation is probably due to the deuce that they threw in week 7.
- Team Blanstein has the most consistent scoring, and is 4-3, which may be another reason that despite low scoring they're still in the mix.

Summary – this year, comparing the Total Points rank with the standings, it seems that luck has played a factor with a few teams, especially the bad luck of the Bad Monkeys (it's karma, Tony) and Devil Dogs, and the good luck of the Snails and Team Blanstein.

Coaching Effectiveness

The three functions of a fantasy football coach are the draft (who do I want on my team?), player management (who do I start this week?) and player moves (who do I keep and who do I drop?). The effectiveness any of these functions really cannot be evaluated until the season is over. Also, how do you factor in injuries, contract holdouts, mid-season trades, and other situations that cannot be anticipated at draft day? Nonetheless, I will attempt to quantify the effectiveness of each team's coaching through the midpoint in the season.

Draft - The total points scored by the team, regardless of who was started, will be biased by some teams holding backup kickers and defensive players (low scoring backups), while other teams having additional skill position players (high scoring backups). The best indicator of the quality of a draft is the sum of the points each week that can be generated by the best possible lineup from that team that week. This will be slightly skewed by injuries, and will ignore improving teams and teams that are going into the dumpster, but will provide an idea of who has been able to field the best possible lineup for the first half of the season.

Starters Scoring - this is the sum of the total points scored by your starting lineup through game 7.

Rank - this is the rank of your starters scoring, with 1 being the strongest and 10 being the weakest

Best Team Scoring- this is the sum of the total points scored by the best possible starting lineup for your team each week through game 7. This is an indication of who had the best draft.

Rank - this is the rank of your best team scoring, with 1 being the strongest and 10 being the weakest

Some interesting notes:

- The Starter's scoring generally correlates with record, with a couple of exceptions. The Bad Monkeys have a much worse record than they should according to their scoring, along with the Dogs, and the Snails and Team Blanstein have a better record than their total scoring reflects.

Player Management - To evaluate player management, I compare the actual points scored with the best possible lineup, determined above. The percentage of the total actually scored versus total possible indicates how effective the player selection has been. To factor out issue of backups like quarterbacks, kickers, etc. who score points but only one can be played every week, I will take the ratio of actual scoring over the worst possible team divided by the difference between best team and worst team.

Some interesting notes:

- The best team matches pretty closely with actual scoring, except for a couple of teams. The Rhinos have the lowest actual scoring, but the 8th overall best team, because of missing a couple of big QB performances. The Snails, Oysters, and Dung all have higher rank for actual scoring than best team, indicating really good coaching, or a lack of depth.

Worst Team Scoring- this is the sum of the total points scored by the worst possible starting lineup for your team each week through game 7. This will be used to factor out differences in rosters.

Rank - this is the rank of your worst team scoring, with 1 being the strongest and 10 being the weakest.

Coaching Effectiveness

Percent of Best – this is the percentage of the best possible team that you actually scored. Perfect player management would result in 100%. Picking the worst possible players will result in 0%. This is an indication of who managed their players best.

Rank - this is the rank of your percentage of best possible scoring, with 1 being the best and 10 being the worst.

Some interesting notes:

- The best team matches pretty closely with actual scoring, except for a couple of teams. The Rhinos have the lowest actual scoring, but the 8th overall best team, because of missing a couple of big QB performances. The Snails, Oysters, and Dung all have higher rank for actual scoring than best team, indicating really good coaching, or a lack of depth.

Player Moves – To evaluate who has made the best player moves, I calculated the total scoring of the originally drafted players, and divided that by the total scoring. This will have a bias for position (for example, if you drafted a backup quarterback and dropped him for a defensive team, your scoring will be reduced) and injuries.

Total Scoring - this is the sum of the total points scored by all your players through game 7, including starters and bench scoring.

Rank - this is the rank of your total scoring, with 1 being the strongest and 10 being the weakest. This is a measure of how good your draft was so far in the season.

Original Draft Scoring - this is the sum of the points each week scored by the team that you originally drafted, including starters and bench scoring.

Rank - this is the rank of your original draft team scoring, with 1 being the strongest and 10 being the weakest.

Percent of Original - this is the percentage of points actually scored versus the original drafted team. A percentage greater than 100% indicates that your player moves improved your team overall. A percentage below 100% indicates that your player moves actually worsened your team.

Rank - this is the rank of your percentage, with 1 being the strongest and 10 being the weakest.

Some interesting notes:

- Team Blainstein appears to have improved itself the most from the draft, scoring almost 10% more than the originally drafted players. Seven teams improved and three teams declined from their originally drafted team, with the Vikings (er, the Dogs) showing the largest decline, almost 5%.

Coaching Effectiveness

Overall Coaching Effectiveness – to calculate the overall coaching effectiveness, I added the ranks for each of the three categories for each team, and ranked overall based on the sum.

Team	Draft	Player Mgt.	Moves	Overall
Heaving Puffers	2	4	9	4
Wandering Snails	7	3	6	5
nancyboyz.com	1	5	3	1
Goey Black Death	6	6	7	T7
Mountain Oysters	5	10	4	T7
Team Blanstein	9	7	1	6
Devil Dogs	3	9	10	10
Bad Monkeys	4	1	8	2
Squatting Dung Beetles	10	2	2	3
Albino Rhinos	8	8	5	9

The nancyboyz.com overall show the most effective coaching (despite a three-game losing streak), followed by the Monkeys and the Dung. The Dogs trail the category, with the penultimate position held by the Rhinos, primarily because of poor overall scoring.
